

Oracle Announces Oracle's JD Edwards EnterpriseOne Tools Release 9.1 Update 3

JD Edwards EnterpriseOne Tools 9.1 update 3 (Tools 9.1.3) is the next update release to the groundbreaking Tools 9.1 release which delivered a next generation user experience for JD Edwards EnterpriseOne 9.0 and 9.1 Application releases.

Background Information

Supporting every JD Edwards EnterpriseOne installation is a JD Edwards EnterpriseOne Tools release which delivers a platform with an innovative user experience, scalability, high performance, security and reliability for the JD Edwards EnterpriseOne application modules. Tools update releases are typically delivered every six to twelve months and contain new feature enhancements, new platform certifications and product maintenance. This update release includes enhancements to the End User experience and Mobile Solutions, Reporting, and System Administration and Development Tools.

Tools 9.1 Update 3 continues to enhance the JD Edwards EnterpriseOne End User Experience

- A new iPad application that can be installed directly onto the iPad device, will optimize the EnterpriseOne User Interface for the iPad, and provide interfaces to native device capabilities such as the camera and images.
- A new One View feature, Watchlist, can be used as a "Manage by Exception" solution allowing users to define and monitor key data points over base EnterpriseOne applications and then easily identify and take action when data has exceeded acceptable thresholds.
- A Composite Application Framework which enables an end user to define a multiple frame layout consisting of an EnterpriseOne application, Oracle Business Intelligence reports and external web applications into a single view.
- An intuitive drop down list feature for User Defined Code entry fields that can be used as alternative to the Visual Assist (flashlight search / select dialog).
- Transaction Change Confirmation Warnings which prompt a user when an action could result in data loss or unnecessary database updates.

Tools 9.1 Update 3 continues to enhance the native JD Edwards EnterpriseOne reporting capabilities

- One View Reports can now be displayed in an EnterpriseOne page, such as the first home page the user is presented with upon login.
- One View Reports can now be launched in a single step from JD Edwards Menus, Favorites, EnterpriseOne Pages, or even from an external web application.
- The Embedded BI Publisher reports can now be configured to dynamically select the printer for output as well as output to a combination of different printers and email addresses in a single report.
- Additional Postscript printer types, including those which do not support a PDF to Postscript conversion on the printer itself, are supported.

Tools 9.1 Update 3 adds System Administration and Application Development capabilities

- An updated version of the [Oracle VM templates](#) for JD Edwards EnterpriseOne includes updated software and new template support for One View Reporting and JD Edwards Mobile applications.
- A simplified process within the Server Manager tool is available for provisioning new JD Edwards EnterpriseOne instances and for cloning existing JD Edwards instances
- Application Development Productivity Improvements including a collapsible group box option within the Forms Design Aid tool and more powerful search capabilities within the toolset.
- Additional security controls are available for users of the JD Edwards EnterpriseOne Smartphone mobile applications.

Key Facts

- JD Edwards EnterpriseOne Tools 9.1 Update 3 is the second update to Tools 9.1.
- Available as part of standard maintenance, JD Edwards EnterpriseOne Tools 9.1 Update 3 is available for Application releases 9.0 (including Updates 1 & 2) and 9.1.
- JD Edwards EnterpriseOne Tools 9.1 Update 3 is not compatible with Application releases prior to JD Edwards EnterpriseOne Applications 9.0.
