

WHITELIGHT GROUP QUICKSMART CONFIGURATOR

ORACLE VALIDATED INTEGRATION WITH JD EDWARDS ENTERPRISEONE

Product configuration solutions for Make-to-Stock industries QuickSmart Configurator provides product selector functionality to simplify order entry and item management.

COMPANY OVERVIEW

WhiteLight Group is a leading provider of business application software and services. Since 2002, WhiteLight Group has offered leading edge solutions to a variety of industries leveraging JD Edwards software products. Our holistic approach drives unparalleled value, ensuring innovative technology solutions are adapted and aligned with the needs of each business and its people—not technically superior, but measurably beneficial.

INTEGRATION OVERVIEW

The WhiteLight QuickSmart Configurator leverages the best of the JD Edwards EnterpriseOne Configurator module to create a product selector and item management capability for Make-to-Stock environments. Every unique product configuration is recorded as a standalone SKU that is fully functional from a sales, inventory, and manufacturing perspective. Key benefits include:

- Advanced product selection
- Reduced item/BOM maintenance
- Controlled model management.

INTEGRATION DETAILS

The WhiteLight QuickSmart Configurator is an extension the JD Edwards EnterpriseOne Configurator module and affects the areas of inventory management, sales order management, and manufacturing management. Oracle JD Edwards customers benefit from this product by significantly expanding their ability to use features/options to select product during sales order entry and automating the creation of item and manufacturing setup steps.

Through the Oracle PartnerNetwork, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and great overall satisfaction.

PRODUCT HIGHLIGHTS INCLUDE:

Sales Orders-Product Selection: The WhiteLight Group QuickSmart Configurator enhances the customer service process by focusing on features/options rather than having to memorize or look up part numbers. Once the customer's desired features/options are recorded, the unique Item number that corresponds to the selected features/options is selected and added to the sales order.

Inventory Inquiry: Customers who have flexibility in the features/options selected by have immediate shipping needs can be accommodated through a look at inventory based on a subset of the feature/option questions being answered. Customers identify their critical options and allow the others to be selected for product that is already in inventory and ready to ship. Inventory is reduced and the customer gets their product faster. A winning combination.

Item Management: New combinations of feature options are automatically added to the item master and item branch. So, you no longer need to create an item for every possible feature combination but only the ones that are requested by customers.

Product Data Management: The WhiteLight Group QuickSmart Configurator will create the supporting manufacturing elements so that you can quickly produce the product even though the selected features/options are a new combination. The same flexibility to create Make-to-Order configurations is now available to automatically create bill of material and routing records that are production ready.

Model Identification: Your special item numbering format based on answers to the features/options can be used so that a unique logical model number can be assigned to your new product.
