*QuickSmart Configurator provides product selector functionality to simplify order entry and item management.*

### Company Overview

WhiteLight Group is a provider of business application software and services. Since 2002, WhiteLight Group has offered leading-edge solutions to a variety of industries leveraging Oracle's JD Edwards software products. Our holistic approach drives unparalleled value, ensuring innovative technology solutions are adapted and aligned with the needs of each business and its people – not just technically superior, but measurably beneficial.

### Integration Overview

WhiteLight's QuickSmart Configurator leverages the best of the JD Edwards EnterpriseOne Configurator module to create a product selector and item management capability for make-to-stock environments. This functionality leverages the JD Edwards EnterpriseOne toolset to create a simple, streamlined integration to utilize this functionality. Every unique product configuration is recorded as a standalone sku that is fully functional from a sales, inventory, and manufacturing perspective. Key benefits include:

- Advanced product selection
- Reduced item/BOM maintenance
- Controlled model management

### Integration Details

The WhiteLight QuickSmart Configurator is an extension to the JD Edwards EnterpriseOne Configurator module and affects the areas of inventory management, sales order management, and manufacturing management. Oracle JD Edwards customers benefit from this product by significantly expanding their ability to use features/options to select product during sales order entry and automating the creation of item and manufacturing setup steps.

Product highlights include:

- Sales Orders – Product Selection: QuickSmart Configurator enhances the customer service process by focusing on features/options rather than having to memorize or look up part numbers. Once the customer's desired features/options are recorded, the unique item number that corresponds to

### Validated Integration

the selected features/options is selected and added to the sales order.

- Item Management: New combinations of feature options are automatically added to the item master and item branch. So, you no longer need to create an item for every possible feature combination but only the ones that are requested by customers.
- Product Data Management: The QuickSmart Configurator will create the supporting manufacturing elements so that you can quickly produce the product even though the selected features/options are a new combination. The same flexibility to create Make to Order configurations is now available to automatically create bill of material and routing records that are production ready.
- Model Identification: Your special item numbering format based on answers to the features/options can be used so that a unique, logical model number can be assigned to your new product.

## Environment

### *WhiteLight Group Environment*

QuickSmart Configurator, Version 12

### *Oracle Environment*

JD Edwards EnterpriseOne, Version 9.1

Oracle Database 11g Release 1

Oracle WebLogic Server 10.3.5
